

Tripwire Reconcile Express

Automate the Detection and Reconciliation of Unauthorized Changes

The statistics are well known: nearly 80% of unplanned downtime is caused by unauthorized change. But how do you know the difference between authorized and unauthorized change if you don't verify that change was planned and authorized? Tripwire offers numerous change reconciliation solutions to support a wide range of requirements. Tripwire® Reconcile Express is designed to help organizations that want to quickly get started automatically tracking unauthorized change, without the need for custom integration to their existing change approval or ticketing systems.

Tripwire Reconcile Express provides the ability to:

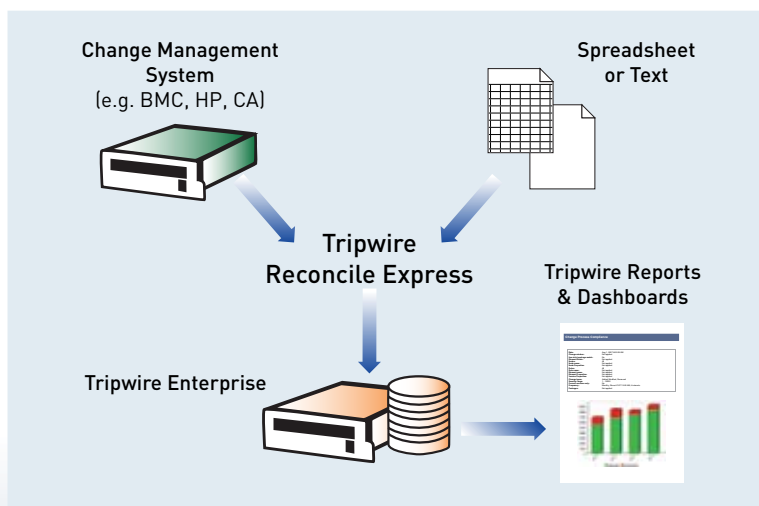

- automate the manual process of reconciling all changes
- investigate unauthorized changes
- reduce the potential for errors that can disrupt systems

Tripwire Reconcile Express can read a file that lists authorized change, and use the data to distinguish between authorized and unauthorized changes.

Expected changes are auto-reconciled and promoted to the most current known and trusted state. Those changes that are unauthorized—posing the most potential risk to the business—are quickly discovered and escalated to ensure they are investigated before they can cause problems. This reduces the risk of unwanted or unauthorized changes being implemented, and increases accountability by comprehensively reconciling all change, no matter the source.

Tripwire Reconcile Express leverages existing tools, systems and solutions, easily integrates with help-desk environments, and requires minimal implementation time.

Tripwire Reconcile Express reduces the risk caused by unauthorized changes, helping you resolve service outages more quickly. It also demonstrates regulatory compliance by automatically reporting and retaining a change audit trail, reducing the time spent on the auditing process.

By efficiently leveraging existing tools, assets and change tracking documents, Tripwire Enterprise quickly discovers and escalates unauthorized change, helping control change and increase accountability across the data center.

BENEFITS OF TRIPWIRE RECONCILE EXPRESS

Mitigates Business Risk

Notification of unauthorized changes helps enforce change processes and creates accountability of all changes to IT systems. Tripwire Reconcile Express also reduces security risks associated with unauthorized changes.

Increases Operational Efficiency

Automating manual processes and being able to identify unauthorized changes reduces time spent on troubleshooting. This improves mean time to repair and increases system availability.

Improves Compliance Process

Tripwire provides automatic reporting of unauthorized change, helping you provide data necessary to the audit process.

Enterprise Class Configuration Audit and Control

Tripwire is suitable to every level of integration, from those organizations wanting to automate manual processes to those seeking to strengthen ITIL best practices. As your company incorporates more complexity, Tripwire can accommodate that growth.

SPECIFICATIONS

Tripwire Enterprise 7

- Tripwire Reconcile Express requires a fully functional installation of Tripwire Enterprise 7

Command Line Utility

- Tripwire Reconcile Express utilizes the TWTOOL CLI. TWTOOL can be installed from the Tripwire Enterprise 7 installation disk. It is located in the 'extras' folder.

Integration Files

- Tripwire Reconcile Express integration files are provided by Tripwire Professional Services. Contact your Tripwire Account Management team for details.

Data Source

- The data source is typically a folder and/or share accessible to the Tripwire Reconcile Express integration framework. The location of this file is defined in the integration configuration and is required for Tripwire Reconcile Express to read the XML file.

Access Credentials

- To execute the Tripwire Reconcile Express solution, a valid Tripwire user account is required.

ABOUT TRIPWIRE

Tripwire, Inc. is the recognized leader of configuration audit and control solutions, serving nearly 6,000 enterprises. As the first in the industry to combine configuration assessment with configuration change auditing, Tripwire helps IT organizations automate compliance across the data center, reducing risk and increasing operational efficiency. Tripwire ensures the organization achieves continuous operational, regulatory and security compliance, helping IT achieve and maintain a known and trusted state. Tripwire is headquartered in Portland, Oregon, with offices worldwide.
